## TO THE ASTROLOGERS of ENGLAND.

Gentlemen,

**T**IS to you Judges I appeal, who are Capable of distinguishing Gold from Dross, or Truth from fiction; it is at your Bar, that I expect a fair decision of the Controversie depending between me and my Adversary, and from you do I hope to reap the reward of *WELL DONE* for all my Labours. My Design in the beginning being neither Envy or Malice, but purely to detect Ignorance when it saucily prevail'd o'er the too Credulous unthinking Crowd, and fairly to expose an impertinent Pretender, who would fain falsely accumulate those Errors upon others to which himself is only liable: His Parallels and other Gimeraks in Mundo are here justly Exploded, and his blind side farther discover'd in Genethliacal performances than ever, wherein 'tis as apparent as the Sun upon the Meridian, that he is wholly Ignorant of the Hy-lech in Nativities, which he has so impudently insisted upon, to his own shame, and the Worlds disappointment.

To Gratifie some Persons, I have incerted a few Hortulane Observations, which I have borrowed from the Ingenious Esq; Evelyn, and for the future intend to Garnish it yearly with such like diversions, and in doing so, hope not to incur the Character of a Plagiary; for I shall endeavour to return every Person what is justly due to his Reputation.

The Calculation of an Ephemeris is a Work of Art and Labour, yet I am sensible there are some that are willing to ease me of this Annual Druagery; But alas, the Specimen they have given of their performances, demonstrates their Intensions are much too nimble for their Care or Abilities. Yet, 'tis with no small reluctancy if I expose any one by Name; but lest it should be reputed to be but a pretence, see Mr. Wing's Almanack for the Year 1687, where he computed the Planets Pla-

## To the Astrologers, &c.

*ces de Novo, and compare it with the Royal Societies Ephemeris for that year, and you will find many times a Planet true one day, and the next day a degree false; also in the year 1685, a Calculation was perform'd in Lilly's Almanack from the Caroline Tables, which if examin'd by Mr Street's for the same year, the falsity thereof will quickly appear. Some others might be instanced, which I shall omit, presuming for what is said already, I may obtain the ill will of those Concern'd.*

*These their Deficiencies were the first Motives that induced me to take my Pen in hand, for the Emitting a more Correct Ephemeris into the World: And this (if God permit) I intend to continue, not only yearly, but also in several Times for Years to come; the first being now ready for the Press, which Commences with the Year 1701, and I expect to have it Completed about Midsummer next, till which time, I shall take my leave, and remain*

Ball and Star  
in Salisbury-  
Court.

Gentlemen,  
Your Annual Servant  
GEORGE PARKER.

•• GLOBES, Cœlestial and Terrestrial of all Sizes, Pocket Globes, Quadrants, &c. are Made and Sold at this Authors Habitation, By C. J.

Mr. Sam. Watson, late of Coventry, now of Long-Acre London, Watch-Maker, Author of that piece of Clock-work, shewing the Cœlestial Motions, Sold to the late Queen of Blessed Memory; hath arrived to that perfection as to shew (in a Pocket Watch with the usual Number of wheels whereby the Work is not burthen'd) several various Motions, besides the Hour and Minute. And hath by a New Method not heretofore discover'd: Brought the vibrations of the long Pendulum (which are liable to sinking) to be always the same length, for the more Exact regulating of Time. Where all Gentlemen that are curious in these Niceties may receive farther Satisfaction.

The **Lithontriptick Elixer**, being a present Remedy for the intolerable Pains of the Wind-Colick, Gravel and Stone, Gout, Rheumatism, and all Running Pains; it Sweetens the whole Mass of Blood, and being Pectoral, Opens all Obstructions of the Breast and Lungs, and gives Ease against the Prissick: Sold by Sam. Clerk in George-Yard Lombard-street, and Mr. Wells at the Crown, near Temple-Bar in Fleet-street.

## Of the ECC LIPSES for the Year 1700.

**B**Efore I give an Account of the Eclipses this Year, I think proper to premise a word or two, of the Suns Eclipse in *Sept.* 1699, viz. Having not time to perform the Calculation, did therefore estimate it to be 10 digits Eclips'd, and inserted the equal time only of the Conjunction, and not the Apparent. It was very foggy Weather at *London*, so that it could not be seen, by which means many People have imagined there was none; yet the Sky was clear in many Parts of the Kingdom, and the Eclipse seen from the beginning to the end. Particularly at *Colchester*, as I have an account from *Mr. Jos. Nelson*, where it began at 8 hou. 0 Min. ended at 10 hours 26 Min. 10. digits 10 m. Eclips'd. The difference of Meridians between *Colchester* and *London* is 4 Min. therefore the end at *London* by that Observation was 10 Hours 30 Min. *Mr. Flamsteed* at *Greenwich* (as I am inform'd by some Persons) saw only the end, and observ'd it to happen at 10 hours 34 Min. which very Minute, *Capt. Edmund Halley* gave by a Computation from his own Theory, performed some time aforehand, for the end thereof.

There will be V. Eclipses this Year, three of the *Sun*, and two of the *Moon*, all of them invisible at *London*, except one of the *Moon* at the beginning, in the following Order:

The first is of the *Sun*, *Feb.* 8. invisible to us. The beginning is at 10 hours 6 min. 45 Sec. The Middle at 11 h. 32 min. 24 Sec. and the End at 12 h. 58 m. 3 S. The Partile Shade enters the Earth at *Sun* rising, in the Lat. of 33 d. 53 m. and to the East of *London* 126 d. 15 m. which is near *Teachio* in *China*; and so traces all the North-East Part of that Country, till it comes to *Cathaja* in the East Part of *Tartaria*, and ends at Sun-set near the North-Pole, in the Lat. of 78 d. 15 m. and to the West of *London*, 179 d. 15 m.

The II is of the *Moon*, *Feb.* 23, and will be a total, and almost a Central Eclipse; the beginning will be at 39 Minutes past 5 in the Morning, the middle at 10 Min. past 7, the end at 7 min. past 9. at *London*; The beginning only will be seen, therefore I think it needless to incert the Type thereof; for the *Moon* sets Eclipsed: But in *New-found-land*, and the Northern Parts of *America* will have a sight thereof from beginning to the end.

The III is of the *Sun*, *August* the 3d. The beginning is at 2 h. 58 m. in the Afternoon, the middle at 5 h. 11 m. and the end at 7 h. 24 m. which by reason of the *Moon* having great South Latitude, it will not be visible at *London*. The Partile Shade enters the Earths Disk in the South Latitude of 22 d. 28 m. near the Tropick of *Capricorn*, and to the West of *London*, 125 d. 46 m. which is in the Main Ocean to the West of *America*, between *Peru* and the Isle of *St. Petro*. Thence traversing Easterly, and inclining to the North, towards the River *A-*

*bitor*,

## Of the Eclipses for the Year 1700.

bitor, and then crosses the South part of *America*, the *Penumbra* leaves the Earths Disk in the unknown Parts of the World, South-East of *Magellanica*, near the Antartick Circle, in the Lat. of 67 d. 17 m. and to the West of London, 59 d. 33 m.

IV. The fourth is of the Moon, *August* 18, near Noon, it will be a total, and almost central Eclipse as that was in *February*; it cannot be seen of us or any part of *Europe*; But to our *Periceij*, and the Easternly parts of *Asia*, it will be visible from the beginning to the end, and be a Notable Object.

V. The fifth and last is of the Sun, *September* the 1 day. The beginning at 11 h. 50 m. the middle at 13 h. 0 m. 3 s. And the end at 14 h. 10 m. 1 s. The Partile shade enters the Earth at Sun Rising, in the Lat. of 84 d. 1 m. and to the West of London, 51 d. 30 m. which happens in the North Sea, near to the North Pole, to the North of *Nova Zembla*; and from thence Traverses the North Sea *Agubela*, on the North of *California*, and ends at Sun-set near St. Mignel in *Maraga*, on the North-west of *America*.

---

Since the publishing of my last Years Ephemeris, I find *John Partidge* denying his Calculating of the Late Duke of *Monmouth's* Nativity; I am astonish'd at the forehead of this most Notorious Person, that can Act or not, say, or unsay, according as the Wind blows from every Quarter; had the Effects hapned according to his Prediction, who but *John* to own it, but as it is quite different, now he is for denying of it: But this will not serve his turn, I will present my Readers with a Copy of his Judgment on the Dukes Nativity, as it was secretly conveyed to and fro among the Plotting Caball, in the Year 1683; to let the whole World Judge whether it be a Calculation or no.

### A COPY of J. P's LETTER, touching the D. of *Monmouth*, &c. Verbatim. 1683.

Worthy SIR,

I Mist meeting with you that Afternoon that we did appoint, by reason of some Business that I was sent for into Holbourn, and therefore what I then promised to give you, I have sent by the hands of your Friend. This is his true Nativity; and he hath for some Tears now approaching a successive Series of Good Directions; and in particular, the next Tear will be of Great Note; and in my Opinion, he will, if ever he comes to Engage in such an Affair, be the only Man that will turn the Affairs of the French Success, that is, he will beat him, for his Nativity shews him to be a

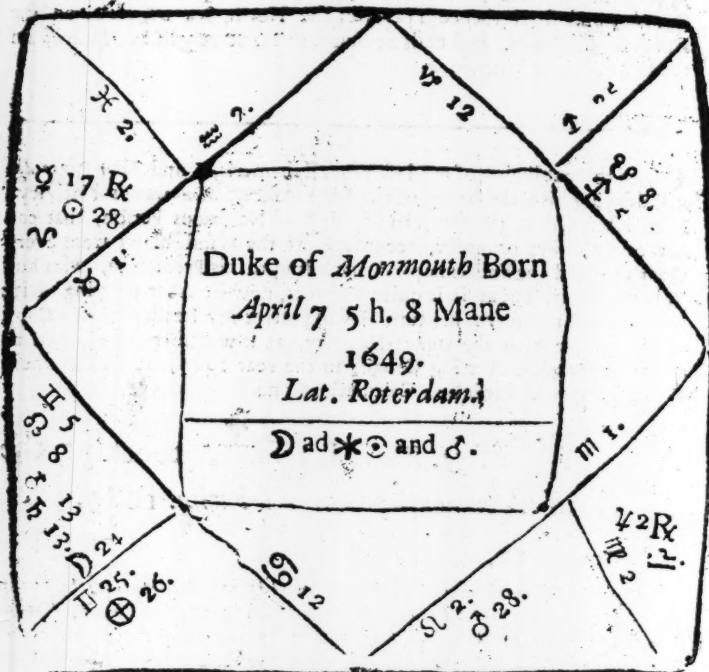

## J. Partridge's Judgment on the

*Soldier, and one desir'd from his first Being to do Great Things by the Power and Conduct of War. Bcc. Although the French King be now sick, my Opinion is, that he will not die This, but the next Year, that is, in August, or near it, he will then go to the De--d and I doubt not but to see James Duke of Monmouth greater than ever he was yet, and that in less time than some think. Pray Sir, what News of Luxemburg is Considerable, let me hear, for honest Men wish well to that City in England, and we hope it will prevent the French Designs.*

Pray give my Service to Mr. Sparrow, and all the rest of my Friends,  
and assure your self that I am

Yours Friend and Servant,

**J. Partridge.**

### *D. of Monmouth's Nativity, explain'd.*

Fortune-teller, and notwithstanding his long *Dutch Study*, has yet made himself no infallible Conjuror. Some Errors in Calculation may happen thro' want of Care or perfection of Art, but when every particular shall arise directly contrary to his fabulous Pronunciations, it is a plain and indisputable Argument, that his pretended foresight of future Events by his knowledge of the Stars, were no more than bare ordinary Guesſes, all hap-hazard, drawn from no Rules, proving themselves nothing but the froth of his own Zeal to Rebellion, as a means to encourage his restless and aspiring Believers, to push on their Wicked, Trayterous and detestable Designs, with a more insatiable Resolution.

His favourite *Hero*, the unfortunate Duke of *Monmouth*, whose Nativity, as he says, was attended with such a Successive Series of good Directions, and by the kind influence of his Stars, was in a little time to be whisk'd up in a Whirlwind of Prosperity, to a wonderful pitch of Sovereign Greatness (which was undoubtedly his meaning) was, we see in his first attempt, by a quite Opposite Fate, surrendred into the hands of his Enemies, and was unhappily compell'd to submit to the Legal reward of his own Rashness and Ambition; and how far these false and dangerous Impositions on the Common People to allure them, to Alienate their Obedience from their lawful Prince, is Commendable or Honest, and how far consistent with the Reputation of our King killing Prophet (which I prov'd him by the recital of a Deposition in my Ephemeris last Year) I desire the World to Consider.

To shew what an excellent knack he had of Communicating Treason to a Brother Conspirator, without the danger of being discover'd, the Reader may observe about the middle of his letter he promises the Duke of M—— great Success against the *French*; by which is meant (as it is reasonable to be supposed) the then Government of *England*; and when he speaks of the *French King*, it is to be understood King *Charles* (if not, then he that was to die the next *August*, and go to the De—— is at this time alive, tho' it is 16 Years since; and proves that his pretence to the *Hilech* is not Skill, but noise and Rattle) but if the Latter, then observe, that Ignorance and Impudence are always Concomitant; he could not be content so sawcily to antedict the Death of his then lawful King, which plainly shews a Will it should so happen, and is in its self Treason; but could not forbear discovering his Aversion to Kingly Power, by most Maliciously, wickedly, and unchristianlike, foisting in this Barbarous Malediction, (*viz.*) he will then go to the De—— Whether such irreverence as this, is tolerable in any Subject, especially an Ignorant Cobler in Astrology, who is always running beyond his Last; I desire any Ordinary Person, who has the least pretence to Honesty, Charity, or Loyalty, to determine.

He then reminds his Friend again of the D—— of M——'s Greatness, which in the plain sense of his words, he promises shall speedily happen. These Factious predictions of the Duke's Good Fortune, were, I say, privately handed about, by subtil promoters of Villany, among a parcel

## J. Partridge's Judgment on the

of Ignorant and disaffected Tools, who were drawn on to the Kingdom's disquiet, and their own Ruin, more by their false Prophets great assurance of the Dukes Success (as being willing to choose the strongest side) than by their own Inclinations to Rebellion; Thus by his infernal delusions, were they made Instruments in a base Treasonable Design, Repugnant to the Laws of God, and fatal to the good of Man.

But Providence at last, who has always an Eye towards Justice, defeated their Attempt, and at once put a Period to that Rebellious Undertaking, bringing the Chief Leader and many of his Accomplices, to condign Punishment; So that I think, I may modestly enough say, that the Blood of those Persons, who Partridge deluded by his insinuating Prophecies, Audacious Calumnies against the Government, and Mercenary Predications to serve himself and a Wicked Party; I say that the Blood of those Blind and unthinking Animals, who were Kidnap'd into Treason by his pretended Promises from the Stars, when he knew not how to consult them, and falling into the Power of the Law, were Executed, is in a great Measure chargeable upon John Partridge, unless he has atton'd for the Guilt thereof by an unfeigned Repentance; which considering his late Practice, and his present course of Life, is very improbable.

In the Conclusion of his Letter, he desires his Friend to let him hear what News of *Luxemburgh* is Considerable, for honest Men with well to that City in *England*. By *Luxemburgh* the Reader must understand, is meant *London*, and by those honest Men who with well to that City were signified those Pious, peaceable, sanctified, good Christians, who were studying and projecting along with honest John Partridge, to destroy *K. Charles II.* pull down the Establish'd Church, and betray the whole Kingdom into the hands of Rebels, all disguis'd under the Cobweb Notion of preventing the *French* Designs; with which Pretence, our Factious Wiskaker in those days us'd to guild his Treasonable Bairs, that the greedy Rabble might swallow them the better without kecking.

Having now done with his Letter, wherein he seemingly shews a dread of some *French* Design in agitation to the prejudice of *England*, it put me upon another Enquiry into Partridge's Calculation of the *French* King's Nativity, which he perform'd in the Year 1680, from whence I have made some very fair Quotations of several Sentences, wherein the Reader may observe how great a Friend, and Flatterer, Hypocritical John has heretofore prov'd himself to His most Christian Majesty's notwithstanding he Declares himself now, according to his present Interest to be so much his Enemy.

The first thing that I take notice of, is, how he styles it the Nativity of the most Valiant and Puissant Monarch *Lewis the XIV.* which is a Title quite different to what he has lately bestow'd on him. And in the latter end of a Paragraph relating to the Qualities of his Mind, there's express'd *verbatim* in the following words. *The Sun casting a*  
*\* to his telescope makes him perform all his Actions with Greatness and*  
*Brilliant Glory suitable to the Dignities of his Mind, the Moon in Conjun-*

*tion*

## On the King of France's Nativity.

tion with ♀, and the ☉ within Orbs of the ✱ of ♄ affords him diverse a admirable Qualifications; and so Lister a Spirit, that he Scorns to trample upon a Conquer'd Enemy. Now (What do you think of this from John's Pen?) This is a Lofly Character with a Witness!

The next Complement he makes to the King of France, in the latter end of his Judgment on the Seventh House, express'd without any variation in these words, viz. *The Natives Enemies are signified by Venus in Conjunction with the Moon near the Præsepe & Aſelli in Opposition of Saturn and ☐ to Jupiter; and therefore for his publick Enemies abroad, the Opposition insatuates them, and possesseth them with many and strange Fears, so that they are but like a Lamb in a Lions Skin, having the Name, but not the Real Nature of Enemies.*

This Paragraph rightly considered, is a great Complement to the Confederate Princes, wherein he terms them but meer Sheep, who are no more in Competition to his Puissant LEWIS, than a Name is to a Thing or Shadow of a Substance, wanting the real Nature, That is, the Conduct, Courage, and Power of an Enemy. A pretty Satyr upon the Greatest Princes and Bravest Generals in Europe; and a most exquisite Panegyrick on his French Hero, projected, as I suppose, with an Expectation of a very Great Reward, by a Generous Present of Pistoles, or else the poor disappointed Monkey wanted a Gold Chain to have bound him fast to the French Interest, such a One as Lilly was Honoured with from the King of Sweden. But when his Royal Native was presented with Crispin's Laborious Operation, by one of his Courtiers, by way of Jest, and was desired to peruse it, The King of France ask'd who writ it? They told him an English Shoemaker, with that he flung it out of his hand with great Scorn and Contempt, rewarding the Author with the Roman Painter's Phrase, *Ne Sutor ultra Crepidam*, which was all the Thanks St. Hugh's Disciple got for his laborious Calculation.

In his Judgment on the eighth House (His Majesty's Life by some slender Opposition, being threatned with some small Danger) he concludes with these words, viz. *and therefore God preserve this Great Prince from Poison, Falls or Wounds.* Pray observe how heartily he Prays for the French King, as if he was inclinable to be as true a Convert as ever was brought over to the Roman Catholick Faith; and no doubt on it, had His Christian Majesty encouraged his first Essay, to please that Party, he would have stayed long enough in England, to have gone to France with King James, instead of running to Holland, with D. of M----s Party.

The last Paragraph I shall take Notice of, is his Judgment on the tenth House, where he delivers this Prediction in these words; *The Sextile of Jupiter to the Sun, and to the Cusp of the M. C. almost, with the Cor Leonis, a Regal fixed Star Culminant; all which are great Arguments of Honour and Splendour, and this Honour will not be momentary and decaying, but durable, even to his Life's End.* Now Reader, let these several Characters and Predictions be compar'd with his Almanacks, for the last 10 Years, and see how prodigiously different that Prince is treated and threatned,

## J. Partridge's Base

threatned; he is saluted by him with the vilest of Characters, that an unmannerly Sloven can invent, and his Subjects often predicted to rise (by this Junior *Hewson*) into Rebellion against him. But before this, the Tory side looking upon him to be a Shatter'd Brain Fellow, one of no Principles, were so far from showing him any manner of Countenance, that they thought him not worth Notice; at which he was so highly disgusted, that he turned Cat in Pan, and came over to the Whiggish Faction, unsaying all he had before said, undoing all he had before done; Railing (as you find) against the King of France, of whom before you see he had so Honourably spoken, bespattering the *English* Government with false and odious Calumnies, Entering into the *Rye-house* Plot to kill the King and betray the Nation, and from that time has imbib'd such Rebellious Principles, that no good Admonitions can irradiate, or worst of Subjects parallel; For having the vanity to expect that Encouragement from the Crown, when he has always wanted both Art, Honesty, and true Loyalty to merit, his disappointment hath made him at last so virulent an Enemy to all Kingly Power, that among his Antimonarchical Crew, he has been often heard to declare, That in his Opinion, a Common-wealth was the only Government in the World, which shews he has suck'd up so much *Dutch* Poyson during his residence in *Holland*, that 'tis a Scandal to his Native Country to own himself an *Englishman*; and because the Reader may be satisfied, I heap no more upon him than he justly deserves, I shall proceed to give him these following instances, as a farther Proof of the Baseness of his Principles.

In the first place, he has been heard openly to declare the Sufferings of the Royal Martyr were no more than his Deserts; and had the Impudence further to assert, it was no greater Crime or Sin, to behead King *Charles* the First, than it was to cut off that Cats Head, pointing to a Cat then in the Room, which was so malignant a Saying, that none sure but Goodness it self can forgive, or the worst of Men be guilty of.

Secondly, In Opposition to Authority, Contempt of the Laws, and in favour of the blackest Murderers, (the Regicides,) he endeavours to mollify their Guilt, and stifle the Remembrance of their abominable Cruelty, by inserting in his Almanack for the Year 1691, K. Ch. I. D. which is understood K. *Charles* I. died or departed this Life, leaving out the Martyrdom of that Pious Prince, the Memory of whose Virtuous Life and Barbarous Sufferings, will bury Monuments, out live Time, and stand up with Eternity.

Thirdly, This Impudent Essay escaping the Notice of Authority, so flush'd him with Insolence, that in his seditious Almanack for the next Year 92, he audaciously presumes to quite pass by the 30 of *January*, and as he had only left out M. before, now undertakes to wholly obliterate the day, in order to deceive posterity; Notwithstanding the Laws command it to be solemnly observ'd, as a day of Humiliation throughout the whole Kingdom, for the averting God's heavy Judgments which  
the

### *Principles detected.*

the Nation has justly deserv'd, in permitting so horrid a Crime to be perpetrated.

This sawcy Omission being taken Notice of by His Grace, Arch-Bishop Tillotson, and many others of the Reverend Clergy, Orders were dispatch'd to the Company of Stationers, to reprehend this Insolence, and for the future prevention of the like Error, they were strictly required to bring all Almanacks to the Arch-Bishops Chaplains to be perus'd and approv'd on by them, before handed to the Press, which ever since has been carefully observ'd.

*Fourthly*, He being now under a necessity to remark the day, or lose the benefit of his Almanack, was forced by his Interest in some Measure, into a compliance with the Laws in this particular; but perform'd this Task against the grain, with such an awkward unwillingness, that his manner of doing it shows not only his obstinacy to Authority, and his disobedience to the Laws of the Nation, but implies his Consent and Approbation to the Mur. of K. Charles the I. which he has endeavour'd by sundry Ways to bury in obscurity; for instead of inserting the Martyrdom in Red Letters, to render it the more inconspicuous he has put it in Black, where in his Almanack for 94, it may assuredly be seen, to his shame, and the Readers further Satisfaction.

And *Fifthly*, To shew what a wonderful Veneration he has for the Memory of the Whiggish Saints who were Martyr'd (as he has been often heard to say) for high Treason, he had the impudence to insert Stephen Colledge in Red Letters, in the very same Almanack, after this manner, St. Col. M. intending no doubt on't, St. for Saint, and not for Steph. by his adding M. which must signify either Murder'd or Martyr'd, endeavouring thus to insinuate himself with the Faction's Party, and cause the weaker part of the Canting Tribe to believe their Zealous Astrologer, was so well read in the Library of the Stars, as to derive a Power from Heaven, to Canonize their lost sheep for Saints in his wicked Kalendar, and rank his King-killing Associates, who were Executed for High Treason, with the Blessed Martyrs of the Church.

*Sixthly*, He is well known to be one of the worthy, well stanch'd Members in Treason, of the Calves head Society, who hold Annually a Feast of Calves-heads, in derision of that Bloody Tragedie, acted by their base Ancestors, and gloried in by their shameless selves, over which they spit their Venom against Monarchy, Rail against Episcopacy, applaud the Murdering of Kings, and extol Rebellion in the People, make Saints of Regicides and Rebels, Preach down all Discipline and Order, adhering to nothing but the foul Villanies of Men and the black deeds of the Devil; These, John Partridge, thou knowest in thy own Conscience, are thy beloved Companions, such being only thy Cronies, as Martial STEED, who limps, but was never wounded in the field of Mars, but by attacking the fortress of Venus, who in Conversation with his old Friend, can Rail against the Laws, and blame the Government for requiring the 30 of January to be observ'd.

## J. Partridge's false Judgment

These and such as these, are the restless Enemies to the happy Constitution of Monarchy, who deride Religion, disquiet the Kingdom, render the Throne unsafe, and call Gods Judgments on the Nation, from which Heaven deliver us.

*Seventhly*, When his kind *Covent-Garden*, She-friend had redeem'd him from the severe pinches of a Scandalous Necessity, when his heels peep'd thro' the holes of his Stockings, and his naked Elbows discover'd their wants thro' the Windows of Poverty, and had (in a great Measure) been the instrument to make him what he is now. He like a Man of Equitable Conscience, to reward this friendship, when the good Rays of Benevolent Stars, and his own ill Actions had put him into a far better Condition than he deserv'd, deny'd the Obligations he was under, and put the good Woman to the trouble of a Suit to recover what Money she had disburs't, to protect and preserve an ungrateful Rebel under the worst of Circumstances.

I shall take my leave of that Subject at this time, but not bid him adieu, till I have Corrected his Sawcy and impertinent Challenge in his last years *Almanack*; and as I have begun with him in the *Astrologick Art* in my *Ephemeris* the last year; so I'll proceed to expose his Ignorance, and not leave him so much as a Fig leaf for a covering to shelter himself under.

In order to do this, and that the World may have a full Account of his rare Qualifications and knowledge in the *Hilech*, and how exactly he can thereby point out the day of a Natives Death, will appear by the following particulars, and afford upon Consideration thereof, as pleasant diversion as that of *Madam Taylers* did last year; for it is in all respects as Opposite from Truth, as the *East* is to the *West*, as hers was. In the Year 1692, John Partridge by his often resorting to the House of the Widow Wells, at the three Tun-Tavern on Ludgate-Hill, after having infused an Opinion of his Parts and Acquirements, (a piece of his subtilty and cunning so to do, in order to propogate his *Astrologick Trade* among the Female Sex) upon a fit opportunity for a reward, undertakes to Calculate the Gentlewomans Nativity. And prudently Considering that Women are Sublunary Creatures and Lovers of Mutation, he according to his Customary Method, tells her in page 10 of his Calculation, how that she should be sure of two Husbands if not three.

In page 11. he undertakes (that she may the better know the Man upon his appearance) to give a description of him, and what manner of Person this Second Husband should be, in these following words, (*viz.*) He shall be moderately Tall and pretty well Set in his Body, but not fat, his Hair naturally Brown or blackish, Comly favour'd, with a kind of a stern Countenance when he is moved or angry, &c. (This is pretty, who has not?) In page 17. he has another pretty piece of Art, (*viz.*) for there, from the Ascend to the *S. h* at 33 years, this he predicts, to give some Disease to her Husband not Recoverable: Ha ha, This? When he had been dead 3 years. Then observing the Woman Comely, and Pleasant in her Conversation, he undertakes to acquaint her, that within the compass of the following

## in Nativities Exposed.

lowing Year, viz. 1693. And that in April or May, the Second Marriage should be Consummated, and in 1695, she should have a Child, and that a Girl too: Then in the Year 1699 from the ☿s influence to the Parallel of ♄ and Ascend. to the ☿ & ☽ to kill the Second Husband, and be a Widow again: 1704 she should have some Sickness, but to pass away her Life at the Age of 73 or 74, without Sickness and, the God of Peace have Mercy on her Soul. The time of her Birth, as he then has stated it, is January the 27th, at 35 Min. past 6 Mane 1656 Commencing.

That the World may now see his Pretensions to Astrology are void of true Judgment, and all his Predictions, by his *Parallels*, and other *Mundane Calculations*, are but vain and empty Fables, and nothing but the effect of a Whimsical Brain. This Gentlewoman, to whom he had appointed so many several changes of Condition, never had a Second Husband, and consequently no more Children than before. And in this present Year 1699, instead of a Husband, her self, to the disappointment of the *Hylech*, dyed a Widow the first day of November, before she was completely 44 years of Age, and almost 30 years short of the time that he predicted her life to last, by his false and insignificant Calculations.

So that for all those Crimes, Errors and Iniquities, with which I have here charged him, and am ready at all times to meet him in the presence of some able Mathematicians, if he pleases; and prove the *Parallel of Mars* in my Diagram last year fell in ☿, which (I hear he confidently asserts did not.) I shall Conclude with drawing

### His CHARACTER.

He's a Rebel in his Principles, an Enemy to Monarchy, Ungrateful to his Friend, A Scoundrel in his Conversation, a Malignant in his Writings, a Lyar in his Almanack, and a Fool of an Astrologer.

### Of *Parallels* in *Zodiac*.

**P**arallels in the *Zodiac* are these, Let a Parallel of declination pass the center of a Planet, as demonstrated by the diagram in my last years Ephemeris, and where that Circle cuts the Ecliptick, it shews the Place of that Planet's Parallel, and it is the same thing that former Authors called Antiscion, and no other. But now by our *Pseudo* Artist, named Parallel, to confound those that are unacquainted with the term, it being an Expression not frequently used in Astrology.

This Parallel, my Antagonist esteems to carry the worst of Influence, and to equal, if not excel the Malefick Ray of the Opposition. Though all the Ancient Students of Astrology have determin'd the contrary, and alledge it is equal to the *Trine Aspect*, and pretend to prove it so by Experience. Now is it not strange, that by changing of the name Only, the Nature should be so too? Why, you see it is so, for being an Antiscion it is very good, but if a Parallel, extream bad, which is the reason of his bad Success.

### Of *Mundane Parallels*.

These have dependance purely to the *Horizon* for a Solution, and is thus to be understood; if two Planets, one in the ascending the other in the  
the

## and Mundane ASPECTS.

the descending Part of Heaven, happen to have equal Elevation above the Earth or *Horizon*, or depression below it, then such Planets are in *Mundane Parallel*, forsooth. Also if a Planet have Altitude above the *Horizon*, and another Planet be depressed, the same Number of degrees below the *Horizon*, these are also in *Mundane Parallel*.

To make this the more intelligible to all Capacities; it is thus: Admit a Planet posited upon the Cusp of the twelfth House, another on the Cusp of the Eighth, these by being equidistant from the *Horizon*, are in *Parallel*; the like, if two are plac'd, one in the Cusp of the Eleventh, the other in the Ninth House, these are also in *Mundane Parallel*.

It is also the same if a Planet be on the Cusp of the Twelfth, and another posited on the Second House, or on the Eleventh, and another on the Third, they are then in *Parallel*, being in the like distance from the *Horizon*.

So likewise it is the same, if two Planets are in the *Western Part* of Heaven posited as before, or under the Earth, if they are in the same position, as before expressed above the Earth. These sort of *Parallels* are also esteemed by our fantastical Author, of pernicious and dreadful Influence, that they are fit Implements for *Satan* to Operate withal; for they inevitably bring Confusion, and turn all things Topsy-turvy wherever they happen, and all his Judgment proves so.

### Of Mundane Aspects:

This placidian Aspect (being new) is notably trump'd up to cause Wonder and Amazement among the young Tyroes, and those meanly qualified in the Astral Science, (to enquire what he means) and abundance of Considerable Business is always assign'd by this dogmatical Nativty-Monger to attend them, let it be either by Position or Direction, if it be a *Square*, a plaguy ill Fate follows; but if a *Sextile* or *Trine*, then great Pleasure and Felicity are its undoubted Concomitants; but how well these rattle-brain'd Fictions will bear an Essay when brought to the Test, will be easily discern'd by every one that hath but half an Eye to see with.

A *Mundane Aspect* is determin'd only by the distance of Houses in a Coelestial Scheme; for as two Signs of the *Zodiack* is a *Sextile*; and three a *Square*; so the distance of two Houses, is a *Mundane Sextile*, three a *Square*, and four a *Trine*. For Admit a Planet be posited on the Cusp of the 10th, and another on the 12th. these two are in *Mundane Sextile*; if in the Ascendant then it is in  $\square$  to that in the 10th. and if Posited in the Second, it is in *Mundane  $\Delta$*  to that in the 10th. House, &c. the like distance is to be observ'd in any of the other Houses.

Having stated these Great and (as he would have 'em thought) Obtruse Mysteries, I will now place them in *Parallel* to each other, viz. a *Mundane Parallel*, and a *Mundane Aspect*, to see how they will agree together; the best way to perform this, is, to shake them in a Bag, and that which gains the upperhand, shall be deem'd the most prevalent in Influence.

In Order thereto, let it be supposed in a Nativty, that two Planets essentially dignified, were posited on the Cusps of the Second and 6th. Houses, and their Influence or Signification by that Station were required by *Mundane Aspect* and *Parallel*.

Their

Their Position on the Cusp of the 2d. and 6th. positively proves that they are in *Mundane Trine* to each other, a Ray of entire Felicity, and does denote that such a Native shall have Comfort and Felicity with their Servants, that they shall be Honest, and discharge that Trust reposed in them with Candor and Faithfulness; no Eye Servants, but on the contrary, those of great Integrity: That such a Person shall be very Successfull in all small Cattle, and gain Substance thereby, &c.

Again, by the same Position. they are also in *Mundane Parallel*, being equally distant from the *Horizon*; Now this being a Position of a violent Nature, loaded with Base and Treacherous Indications, and operates quite contrary to the former; for it Stimulates the Natives Servants to Baseness, Sloth and Idleness, and causes them to imbibe many False and Perfidious Principles; he is unhappy in small Cattle; for if he Trades or Deals in them they prove detrimental him.

By this it appears that the effect of this Coelestial Position is of an opposite Nature to the former, and indeed 'tis such a palpable Contradiction to each other, that I am of Opinion nothing can be Agitated by it: For the Malevolent Beam of one, dissipates the Benevolent Ray of the other, and the contrary, so that it is Evident that this Genethliacal Jugler, is really grown Monstrous, for he can blow Hot and Cold with one and the same Breath, only by varying the Corner of his Mouth, as it comes forth.

*The Names of the Lord Mayor, Aldermen and Sheriffs of the City of Lond. for the Year 1700; with the particular Wards under each ones Jurisdiction.*

## OBSERVATIONS.

**S**ea-Cole Sut strewed on the Ground, improves the same to a great degree; and destroys all Insects, Reptiles and Worms, &c. that are very pernicious to Gardens.

16 Day, Venus our Evening Star, Sets a little before 6.

Jupiter the Morning Star Rises 1 hour before the Sun.

At the beginning of the Year the Planet *Mars* leaves ~~his~~ his detriment, and enters his own Territories, where he meets with the *Trine* of *Saturn* which produces very acceptable and welcome News to all such Persons as are under his Tuition.

**King Charles I** *Murth.* Jan. 30, 1649.

*See Royal Charles the dismal Stage ascend, Where Hellish Imps in Vizards on him tend.*

[display] *Whilst \* Angels round His Head their Wings And wait on him, whom nothing can dismay. And soon as e're the Fatal Stroke is given Convey him hence, to Reign with Christ in Heav'n*

\* I have heard it affirm'd, that two Doves or Pidgeons were Observ'd to fly circling over the Scaffold, during the time of the Kings being upon it, which disappeared, and could not be seen after the Head was Severed from the Body.

9 Day; the Sun Rises East, and Sets West.  
**M**R. Tho. Street, Author of those Excel-  
 lent Tables, Entituled *Astronomia Caro-*  
*lina*, was Born March 5. 1621. 9 minutes be-  
 fore Sun Set, 24 degrees of  $\text{M}$  ascended,  
 which Corrected time, that Author gave me  
 for a true one, and not after Sun Set, as  
 was asserted last Year in an Almanack.  
 He had the Honour to read *Astronomical*  
 Lectures at *Gresham Colledge*, and was E-  
 minently qualified in the Mathematical Stu-  
 dies, as appears by several Testimonies  
 from Persons of Great *Worth* and *Quality*.

He was (to my knowledge) Composing  
 new Tables, by which a Planets Place  
 would be obtain'd as easily as to take the  
 proportional part out of *Argol's Primum*  
*Mobile*, and had Encouragement thereto  
 by subscriptions from several Ingenious Persons. But  
 alas, they fell short of supporting him to perform  
 the same, so that That great Work is fallen; which  
 would have been an Honour to the *English* Nation.

And when he lay upon his Dying-Bed, requested (if  
 his Friends were willing to be at the Charge of a Stone  
 to lay over him) that this might be his Epitaph.

*Here lies the Earth of One that thought some Good,  
 Although too few him rightly understood.*

*Above the Stars his heightened Mind did fly;  
 His better Part into Eternity.*

This is incerted to the Memory of that Author,  
 whose *Ashes* has been lately villified, by that Ignorant  
*Rascal Partridge*, who was not Worthy to Sowl the  
 others old Shoes.

## OBSERVATIONS.

THE Planet Mercury is with the Pleiades the greatest part of this Month, and the next following, a Transit not very common to be observ'd, therefore let the Curious heed his influencies; And to add fewel to the Fire, the Planet Mars is in opposition to him all the while, I hope no Plot in Agitation. Pray God Bless and Preserve Poor Ireland, and keep that Nation in Peace and Unity, for we fear some Combustion may happen in that Kingdom by a dissatisfied Party. Pray God open their Eyes that they may see those things that tend to their Peace, and learn to know that there is nothing more certain than uncertainty in all Human Affairs.

16 Day, Sun Rises E. N. E. and Sets W. N. W.

About the middle of the Month, Venus the Evening Star Sets 1 hour before Midnight.

## OBSERVATIONS.

**M**ARS and Mercury at the begin-  
 ning are both Retrograde, and near  
 to the Earth in *Scorpio*, a Sign always stig-  
 matized for falsity: I heartily wish the In-  
 habitants of this Terrestrial Globe, may not  
 be corrupted by it; and that no perfidious  
 Trick, or under-hand Dealing be in Agita-  
 tion, to disturb the Nations Peace and  
 Tranquility; No *Messanello's*, or forty one  
 Reformers (I hope) appear in Our days,  
 for *Mars* in *Scorpio*, in Opposition to *Mer-*  
*cury* with the *Pleiades*, is an untoward Po-  
 sition, for the Rabble to herd toge-  
 ther On. I well remember the Ragged  
 Rout in *Easter* Holy-days, 1668, and the  
*Welch* Camp near *Islington*, in the late  
 King *James's* time. *Caveat.*

10 Day Sun Rises North East and by East,  
 and Sets North West and by West.

Now Sow Sweet Marjoram, Basil, Thyme,  
 and other hot and Aromatick Herbs and  
 Plants, that are the most tender.

If the Weather be extream, shade your  
 Carnations and Gillyflowers after Mid-  
 day from the Heat: And at the Full of  
 the Moon, Plant your Stock-gillyflowers in  
 Beds.

June hath xxx Days.

## OBSERVATIONS.

THE Nimble and Active Planet Mercury, is very Swift in Motion this Month; for being *Perihelion*, he almost passes fix Signs of the *Zodiack Helio-centrick*, at the same time in his *Geocentrick* Position, enters  $\Pi$  his own dignities, where *Jupiter* and he unite by a friendly Ray, and resolve to prefer and Advance some Worthy and deserving Person, of the long Robe, unto Honour and Dignity. In the mean while many projects are also under Consideration: the Nature and Quality thereof, time will best discover, however it seems to be a time of great Consultation in several Courts of *Europe*, and several Missives and Agents, are dispatch'd to and fro upon Emergent Occasions.

Good News arrives to the Merchants of *London*, &c. Which I Pray God continue.

10 Day is the longest day of the Year; now the Sun rises 39 deg. 50 min. from the East to the North, viz. almost North East, and Sets the same distance from the West to the North.

## ADVERTISEMENT.

## OBSERVATIONS.

There's nothing permanent and lasting in this World; all things whatever are Subject to Mutability, and to Change: the *Sun* never yet shined so clear and powerful, as to dissipate and dissolve the Clouds so as never to be obscured again: Nor the Planets were never posited in such friendly rays to each other, but that *Time* the dissolver of all Terrestrial Beings has made an alteration. And tho' the Aspects of the Planets in the last Month were of a Salubrious Nature, yet here they are otherwise, and present things in a other hew; for *Jupiter* and *Mercury* Oppose each other out of all dignities, and so does the *Sun* and *Jupiter*, *Mars* is in an angry Square to *Mercury*, and *Saturn* opposes *Venus*. From these Positions the World is put into a ferment, and a time of Discord seems most predominant: God send the *Dog-Star* don't bite in *England*. Many Women are but in a sickly and weak Condition, much Trouble and Sorrow attends some, whilst others are but justly Punished for their Crimes and base Actions.

## OBSERVATIONS.

HERE, we have the Planet *Mercury*, dignified in an extraordinary manner, by being posited in *Virgo*, his own House, and there supported by the Queen of Love; and the Reverend *Jupiter* too, makes his humble Obedience to him, with all the Declarations and Assurance of endeared Affections, that he is capable of performing. The Heroick Commander also declares his Sword and Person, are entirely devoted to his Service and Commands; so that all these seem to strive which shall Excel each other in their Florid Rhetorick, and adore him as the Rising Sun. While the well pleas'd *Mercury*, as if he were *Rex Planetarum*, receives them all with Pleasure and Delight; in the mean while, the Envious and Snarling *Saturn*, grins and gnashes his Teeth at him, with an inveterate Malice. The result of all, is this, some Mercurial Person; What if the *Emperour* happen to be Congratulated and address'd by the *Electoral Princes*, Nay, What if his Holiness himself Augment the Number, and condescends to some particular Act or thing not usually done? Really, my Opinion is, that somewhat of this Nature is perform'd, or at least some discreet and Ingenious Person is notably Advanc'd.

## OBSERVATIONS.

Was London Burnt in Anno Sixty Six,  
 By fierce Phanaticks, or by Popish Tricks.  
*Ratbone* and his Accomplices, can tell,  
 Tho' Silly *Hubert* for't a Victim fell. [Cope,  
 May Plotting Villains that with Envy  
 Have their like Fate, swing in a Hempen  
 [Rope.

1666, April 26. 'This day' were Indicted  
 'and Convicted at the *Old-Baily, London*; *John*  
 '*Ratbone*, and some other Officers in the  
 'late *Oliverian Army*, for Conspiring against  
 'the Royal Person of His Majesty. In Order  
 'to which they had laid their Plot for the  
 'Surprise of the Tower, the Killing of the  
 'Lord General, and the better, to Effect their  
 'Design: The City of *London* was to have  
 'been Fired. The 3d of *September* next was  
 'pitched upon for the Attempt, as being  
 'found by *Lilly's Almanack* (as they Con-  
 'firmed it) to be a lucky day, Evidence against  
 'them being very clear they were found'guil-  
 'ty of High Treason, and Hang'd, drawn  
 'and quarter'd at *Tyburn*.

## OBSERVATIONS.

**Morning Star Rises 7 min. before 3**

Venus is posited in  $\pi$  wherein she is debilitated and there Opposed by  $\zeta$ , this brings Sorrow and perplexity to the fair Sex. Some Eminent female falls under the frowns, and displeasure of her Superior, and perhaps with much submission receives the Censure of a Judge.

The  $\odot$  and  $\odot$  are in Square to  $\zeta$  who is but meanly posited, some new Whimsical Tenets broached in Matters of Religion, by rattle brain'd and unquiet Spirited People, to the disgrace and scandal of Christian Religion: Some differences agitated and Industriously fomented among the Clergy the see of Rome 'tis probable may be Sensible of its influences, and tho it be a year of Jubilee, yet new Ruptures may ensue.

**19 day Sun rises, E. South E. sets W. S. W.**

What fruit now remains on Trees gather in a dry day the Moon decreasing in Light, and take care of bruising. Lay open the Roots of old Trees. Cut and prune Roses yearly.

Sow stony and hard Kernels and Seeds, as Cherry, Pear, Plum, Peaches &c. Nuts, Haws, Ashen and Maple-Keys, Acorns, Apple, Pear and Crab Kernels for Stocks, remembering to cover them with litter to preserve them from Frosts.

In this and the succeeding Month Sow early Beans and Pease.

## OBSERVATIONS.

THE Planet ♄ is now at her greatest distance from the Sun, and may be seen to Rise in the Morning 4 hours and half before the Sun, i. e. 10 Min. past 3.

Upon the 9th. day happens a ☿ ♄. from the Center of their Orbs, altho' the same is not Visible to us, till the latter end of the next Month; it is Celebrated in the Watry Trygon in 14 Degrees of the Sign ♋. I am inclined to think it may Stimulate some Mutinous and Sordid Actions among the meaner sort of People. Great Insultations and Barbarities, with much Violence will be very prevalent on the Roads and where House-breakers resort. Some store of Rain also Succeeds, if not Inundations, this happens chiefly in those places under the Government of the Sign ♋. tho' all Places under the Watry Trygon, may more or less feel its effects.

11 Day Sun Rises S. East and by East, Sets S. W. and by West.

In this as in the last Month, carry Soil and Dung, and mix it with Earth, that it may Rot, and be fit for use against Spring. Now Set and transplant Trees, loose no time, for Frosts come on.

Lay Carrots in Cellars, and cover them with Sand. Take up Potatoes also for Winter Spending.

# December hath xxxi Days.

## OBSERVATIONS.

I N this and the Succeeding Month *Prune* and *Nail Wall-fruit*; also *Plant Vines*, and stocks for *Grafting*.

Sow *Pomace of Cyder*, *Pressings* to raise *Nurseries*, and Set all Sorts of *Kernels* and *Stones*.

Either late in this Month or in the next, *Prune* and Cut off all your *Vine* shoots to the very Root, save one or two of the *Routeft*, with 3 or 4 Sprigs of young Wood.

In the beginning of the Month the planet ♄ is at his greatest distance from the Sun, and may be seen of us in the Evening soon after Sun Set.

The 10 day is the *Shortest*, now the Sun rises 39 degrees 50 min. from the *East*, to the *South*, viz. almost *South East*; and Sets the same distance from the *West*.

The 16 day *Venus* the Morning Star rises half an hour after four.

## ADVERTISEMENT.

**John Watts**, who is very expert in drawing and cleaning Natural Teeth (and Sets in Artificial ones so firm and exact that they may be eat upon, and not be discovered by the nicest Observer) lives at the Sign of the Hand and Mouth and Kings Arms, within three doors of *Bride-Lane* in *Fleet-street*, London.

For the Poor he draws Teeth gratis.
